The management builds positions early enough in leading technology companies with a long term investment commitment. **These investments bear a high degree of risk.**

Venture capital

Venture Capital investing is the process of building a business from scratch. The investments of venture capital are made through different forms of securities ranging from common stock to preferred shares and convertible debt.

Venture capital can be private or public depending on the stage of the company. The company naturally evolves from its inception through generating profits if successful. In most cases several rounds of financing at different prices are conducted.

The proceeds of such financing are mostly used for working capital to build the business as such companies still generate losses. The characteristics of venture investments are typically of high risk, lack of a market for the securities and a long-term investment horizon. No assurance can be given that returns are realized. **The risks of venture capital investments are 100%.**

Investing in New Venturetec

New Venturetec is the owner of Venturetec, Inc., which is currently holding investments in six portfolio companies. The participations are managed to assure the best possible value creation for its shareholders. Cash from disinvestments will likely be reinvested. The investment horizon should be 10 years or more. A shareholder is recommended to follow

the development with interest and base an investment or disinvestment decision on results of the development of the portfolio companies rather than on the general capital market and the investors' sentiment. **Any investor should only invest in New Venturetec if he can afford the complete loss of the investment without having to change his lifestyle. Significant risk is involved and the timelines may exceed the expectations. In addition, the market of New Venturetec shares is very illiquid. The risks of venture investments are 100%. The total loss of the investment has to be considered as a realistic possibility.**

Liquidity of Venturetec's investment in Osiris Therapeutics

Venturetec, Inc. directly owns 4,103,301 shares of Osiris Therapeutics, which represents 12.0% of the outstanding shares of Osiris Therapeutics. Based on this ownership, Venturetec is a reporting person in respect of Osiris Therapeutics and is subject to reporting requirements of Section 16 of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Venturetec has reported its transactions and holdings of Osiris Therapeutics with the United States Securities and Exchange Commission (SEC) through the filing of Forms 3 and 4, consistently since first becoming a reporting person following the IPO of Osiris Therapeutics.

The sale by Venturetec of shares of Osiris Therapeutics common stock requires either registration under the Securities Act of 1933, as amended (the "Securities Act"), or that the sale be exempt from registration. Rule 144 under the Securities Act provides a safe harbor from registration for sales by a person other than an issuer, underwriter or dealer. Compliance with Rule 144 requires compliance with various restrictions set forth in the rule, including limitations on the number of shares sold in a given period and the manner in which sales may be completed. For sales by an affiliate of an issuer, which Venturetec is presumed to be, Rule 144 provides that the volume of securities sold during any preceding three-month period may not exceed the greatest of the following limitations:

1. 1% of the stock outstanding, which for Osiris Therapeutics would be 343,156 shares.
2. The average weekly reported volume of trading reported on all national securities exchanges during the preceding four weeks ending September 26, 2014, which for Osiris Therapeutics is currently 692,275.
3. The average weekly volume of trading of the securities reported through the consolidated transaction reporting system, which for the week ended September 26, 2014, was 563,200 shares.

Accordingly, for sales of Osiris Therapeutics common stock, the so called "volume limitation" under Rule 144 for an affiliate is currently 692,275 shares available to be sold during the next three months.

Rule 144 also requires, in the case of affiliate sales, that a Form 144 be filed with the SEC in advance of the sale. The sale must then take place within 90 days after the filing of the Form 144. If and when a sale transaction occurs, the sale must be reported to the SEC by the filing of a Form 4, within two days.

In addition, as a greater than 10% Shareholder, Venturetec is further limited as to when it can engage in purchasing or selling shares of Osiris Therapeutics. Venturetec is subject to Osiris' Trading Window and must clear all purchase and/or sales transactions in the Company's common stock with either the President & CEO or the Chief Financial Officer. Osiris' Trading Window usually closes 15-days prior to the end of each fiscal quarter and then reopens on the third Trading Day after the financial results for the quarter are published, which typically is 40–45 days after the fiscal quarter end. The Trading Window may also close during other times at the discretion of the Company.

These restrictions are unrelated and independent of Mr. Friedli's involvement.

Risk management

Most of the investees are in a development stage, disclosing accumulated deficits and little or no revenues. Their ability to continue as a going concern may depend on additional funding. Companies which are in the need of cash often face unfavourable financing terms to existing shareholders – in our case New Venturetec – which basically means heavy dilution and unfavourable liquidation preferences in case of a trade sale. This is only if the company is able to attract investments in the first place for which no assurance can be given that this may occur. These investments offer the opportunity of significant capital gains, but involve a high degree of business and financial risks that can result in substantial losses, including the risk of a total un-recoverability of an investment. The financial risk management objectives and policy of New Venturetec are to minimize dilution by structuring the initial investment accordingly. Other protective measures such as liquidation preferences are also part of the Company's policy. However, the operational risk remains. Furthermore, the Company does not hedge any foreign currencies or interest rate risk exposure. **The risks of venture capital investments are 100%. The total loss of the investment is a realistic possibility.**

Net asset value and market price – premium/discount

The most common valuation guideline for investment companies is the net asset value. The net asset value is not an absolute value. It is an indicator based on guidelines. By no means does the net asset value represent a "true" value.

The market price is the price paid by the market participants. It is a market price determination by demand and supply. There are times when supply is higher than demand and vice versa. That simply does not correlate with the actual business performance of a company on a daily basis in any significant way. Reasons why somebody may decide to buy or sell are, in many cases, unrelated or only superficially related to the business performance.

New Venturetec offers a participation in a portfolio of young companies, not a trading opportunity. New Venturetec is the wrong vehicle for traders. It is an opportunity for investors, who understand investing in the very old fashioned and traditional way. **Investing in venture capital is a long-term commitment with high risks of 100% losses.**
